- NAV Source [NAV1, NAV2, N2000, NX2]
- XTE (cross-track error) limit [nautical miles]
- Waypoint Arrival Sequencing [Manual, Auto, Silent]
- Correction [CTS, XTE, or Both]
- XTE Sense [Norm, Rev]
- Maximum Correction [30° – 90°]

ALARM CLEAR

Press  to clear an alarm.

ComNav® Commander P2 Autopilot Operation — Quick Reference Guide

WORK mode

(Aw or Nw is shown in upper left of display)

Caution! WORK mode should only be used by experienced operators who fully understand the operation of this mode.

WORK mode is engaged automatically at a set speed (see Work Trip Point in the Operation Manual), if the mode is activated by the vessel's operator.

WORK mode can also be engaged manually (see Manual).

Note: WORK mode is not available if Vessel Type in the DOCKSIDE menu is set to SAIL.

To activate WORK mode:

1. Switch to AUTO mode or NAV mode.
2. Press  for 3 seconds.

To de-activate WORK mode:

1. Press  for 3 seconds.

AUTO or NAV WIND modes

(Aw or Nw is shown in upper left of display)

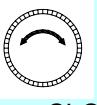

Be sure to read the relevant sections of the Operation Manual prior to using a WIND mode.

Note: WIND modes are available only when Vessel Type in the DOCKSIDE menu is set to SAIL (a compatible wind speed transducer must also be connected to the autopilot).

To enter AUTO or NAV WIND mode:

1. Bring the vessel around so that the wind angle on the bow is between about 45° and 165° (Port or Starboard)
2. Switch to AUTO or NAV mode
3. Press  for 3 seconds

While in a WIND mode:

Use  to change angle to wind. Range is limited to between CLOSE HAUL and GYBE HOLD POINT settings.

Use  and  or  to TACK or GYBE.

Press  to switch to the alternative AUTO WIND mode (press it again to switch back to regular AUTO WIND mode).

To exit AUTO or NAV WIND mode:

1. Press  for 3 seconds.

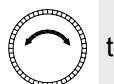

DOCKSIDE menu

♦ Refer to Installation Manual when using this menu ♦

To enter the DOCKSIDE menu:

1. Begin with Power OFF.
2. Press  while holding both  and 
3. Release all buttons once the VERSION numbers are displayed.

Use  or  to select & highlight a parameter.

Use  to change value of selected parameter.

Press  to begin automated Setup Scripts:

- Reset [do not use unless advised by ComNav]
- Vessel Type [sets initial steering parameters]
- Analog Compass Type [choose appropriate one]
- Compass Setup [sets up Compass]
- Drive Setup [sets up rudder limits, etc.]
- Exit
- Alarm Output [sets External Alarm type]
- Thruster Type [choose appropriate one]
- Thruster Minimum [% of max. supply voltage]
- Thruster Maximum [% of max. supply voltage] (Thruster operation requires a CT7 Interface)
- Language [choose appropriate one]

To exit the DOCKSIDE menu:

Highlight Exit and press  (go to STANDBY mode)

or else press  until RELEASE appears in display.

(all settings are automatically saved on exiting)

This sheet contains summary information on how to set up and operate the Commander P2 autopilot.

This information should not be considered as a complete guide to setting up and operating the autopilot.

Be sure to read and understand the important safety and operational information presented in the *Commander P2 Installation & Operation Manual* before using the autopilot.
