

SyncrolP Series VMS Software and NVR Compatibility

Digimerge's SyncrolP Series IP cameras are compliant with ONVIF v2.1 and are backwards compatible to v1.02. This ensures compatibility and interoperability with popular third party VMS software packages and NVR's.

The following VMS and NVR solutions have been tested by Digimerge for compatibility with SyncrolP Series IP cameras and offer the following features:

	Digimerge Syncro-V	Digimerge CMS-DH Pro	Milestone XProtect® Go
# of IP Cameras Supported	36	16	8 ⁱ
Client/Server Support	Client-only	Client-only	Client/Server
Mobile Applications	No	No	iPhone®, iPad®, Android™ ⁱⁱ
Motion Detection	Yes	Yes	Yes
Edge Recording (SD Card Recording)	Yes	No	No
View cameras from Digimerge Touch Series DVR's	No	Yes	No
Cost	Free	Free	Free (Registration Required)
Supported provided by	Digimerge	Digimerge	Milestone ⁱⁱⁱ

i. Paid product upgrades for Milestone XProtect® support additional cameras and features and are available from www.milestonesys.com/productoverview

ii. To view your installation from a smartphone or tablet, you can install the free Milestone Mobile Server component and XProtect® Mobile (available as a free download on the App StoreSM and Google Play).

iii. Visit www.milestonesys.com/go/support for Milestone technical support or documentation.

Key Features Defined

- **Client/Server Support:** A Client/Server application is an application that can host multiple IP cameras on a centralized location for access by remote clients. The server computer must be correctly configured for remote access, according to the instructions provided by the software publisher. A Client-Only application can remotely connect to IP cameras, but each camera must be individually configured to enable remote access through port forwarding and DDNS setup.
- **Edge Recording:** Edge Recording refers to recording outside of the network (at the "edge" of the network). SyncrolP Series cameras are capable of recording to a microSD or SD card, and this recording can still function even if the network connection is disrupted. Edge recording requires the camera be connected to power. At this time, playback of microSD/SD card recordings requires Syncro-V.
- **View cameras from Digimerge Touch Series DVR's:** Digimerge CMS-DH Pro is compatible with Digimerge Touch Series DVR's, as well as SyncrolP series IP cameras. You can view cameras connected to your DVR side-by-side to your IP cameras using the Virtual DVR feature.
