⚠ SAFETY INSTRUCTIONS

⚠ WARNING

ELECTRICAL SHOCK HAZARD
Do not open the equipment unless totally familiar with electrical circuits and service manual.

Only qualified personnel should work inside the equipment.

Turn off the power at the switchboard before beginning the installation.

Fire or electrical shock can result if the power is left on.

Do not install the equipment where it may get wet from rain or water splash.

Water in the equipment can result in fire, electrical shock or equipment damage.

Be sure no water leaks in at the transducer mounting location.

Water leakage can sink the vessel. Also, confirm that the transducer will not loosen by ship's vibration. The installer of the equipment is solely responsible for the proper installation of the equipment. FURUNO will assume no responsibility for any damage associated with improper installation.

Be sure that the power supply is compatible with the voltage rating of the equipment.

Connection of an incorrect power supply can cause fire or equipment damage. The voltage rating of the equipment appears on the label above the power connector.

⚠ WARNING

Install the transducer according to the installation instructions.

Failure to install the transducer correctly may result in water leakage and damage to the ship's hull.

For wooden or FRP vessel using a steel tank, attach a zinc plate to the hull to prevent electrolytic corrosion.

Electrolytic corrosion can, in the worst case, result in loss of the transducer.

⚠ CAUTION

Ground the equipment to prevent mutual interference.

Observe the following compass safe distances to prevent interference to a magnetic compass:

	Standard compass	Steering compass
CV-301	0.85 m	0.55 m
CV-302	1.55 m	0.95 m
CV-300	1.25 m	0.70 m
CV-304	1.10 m	0.70 m

Do not allow warm water or any other liquid other than seawater or freshwater to contact the transducer.

Damage to the transducer may result.

Do not install the transducer where noise or air bubbles is present.

Performance will be affected.

## ⚠ CAUTION

The transducer cable must he handled carefully, following the guidelines below.

- **Keep fuels and oils away from the cable.**
- **Locate the cable where it will not be damaged.**
- **The cable sheath is made of chlorophrene or polychloride vinyl, which are easily by damaged plastic solvents such as toulene. Locate the cable well away from plastic solvents.**

1. MOUNTING

1.1   Control Unit

Mounting considerations

When selecting a mounting location, keep in mind the following points:

- Select a location where the control unit can be operated conveniently.

- Locate the unit away from heat sources because of heat that can build up inside the unit.

- Locate the equipment away from places subject to water splash and rain.

- Determine the mounting location considering the length of the signal cable between the control unit and the processor unit. (The length of the signal cable is 5 m.)

- Observe the compass safe distances on page ii to prevent deviation of a magnetic compass.

Fixing with KB fixing plate

1. Fix the KB fixing plate to the bottom of the control unit.
2. Attach cushions to the bottom of the control unit as shown below.
3. Fix it to a desired location with self-tapping screws (local supply).

KB fixing plate   Cushion
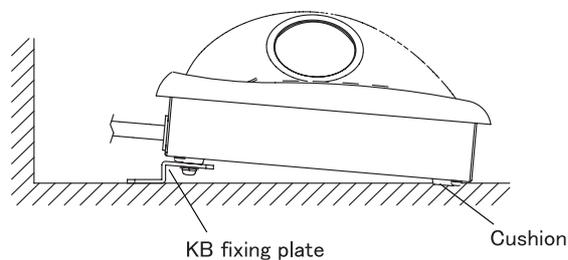

1. MOUNTING

Fixing without KB fixing metal

1. Drill four mounting holes of 5 mm diameter referring to the drawing below.
2. Fix the control unit with four screws (M4) from under side of the desktop. Use M4x12 (supplied) for mounting panel thickness "t" between 2 and 5 mm. For greater thickness, screw length shall be M4x(t+7.8±2).

4-M4 (Fixing holes) (bottom)
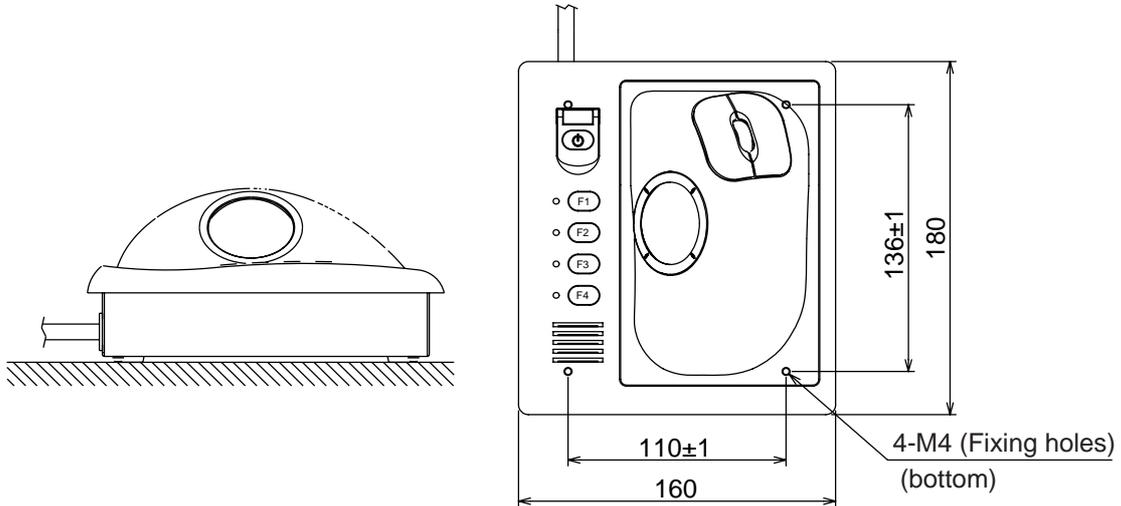

1.2   Processor Unit

The processor unit can be mounted on the deck, a desktop or on a bulkhead. Select a mounting location considering the points below.

- Locate the unit out of direct sunlight.

- Select a location where temperature and humidity are moderate and stable.

- Locate the unit where its cover can be easily removed and cabling easily accessed.

- For mounting on a bulkhead be sure the mounting location is strong enough to support the unit under the pitching and rolling normally encountered on the vessel.

- Leave sufficient space around the unit for maintenance and servicing. Recommended maintenance space "#" appears in the figure below.

Tabletop or deck mounting: Fasten with four tapping screws.

Bulkhead mounting: Screw in two tapping screws in mounting location for lower mounting holes of the unit, leaving 5 mm protruding. Set the processor unit to the screws, tighten screws and screw in two tapping screws for upper mounting holes of the unit.
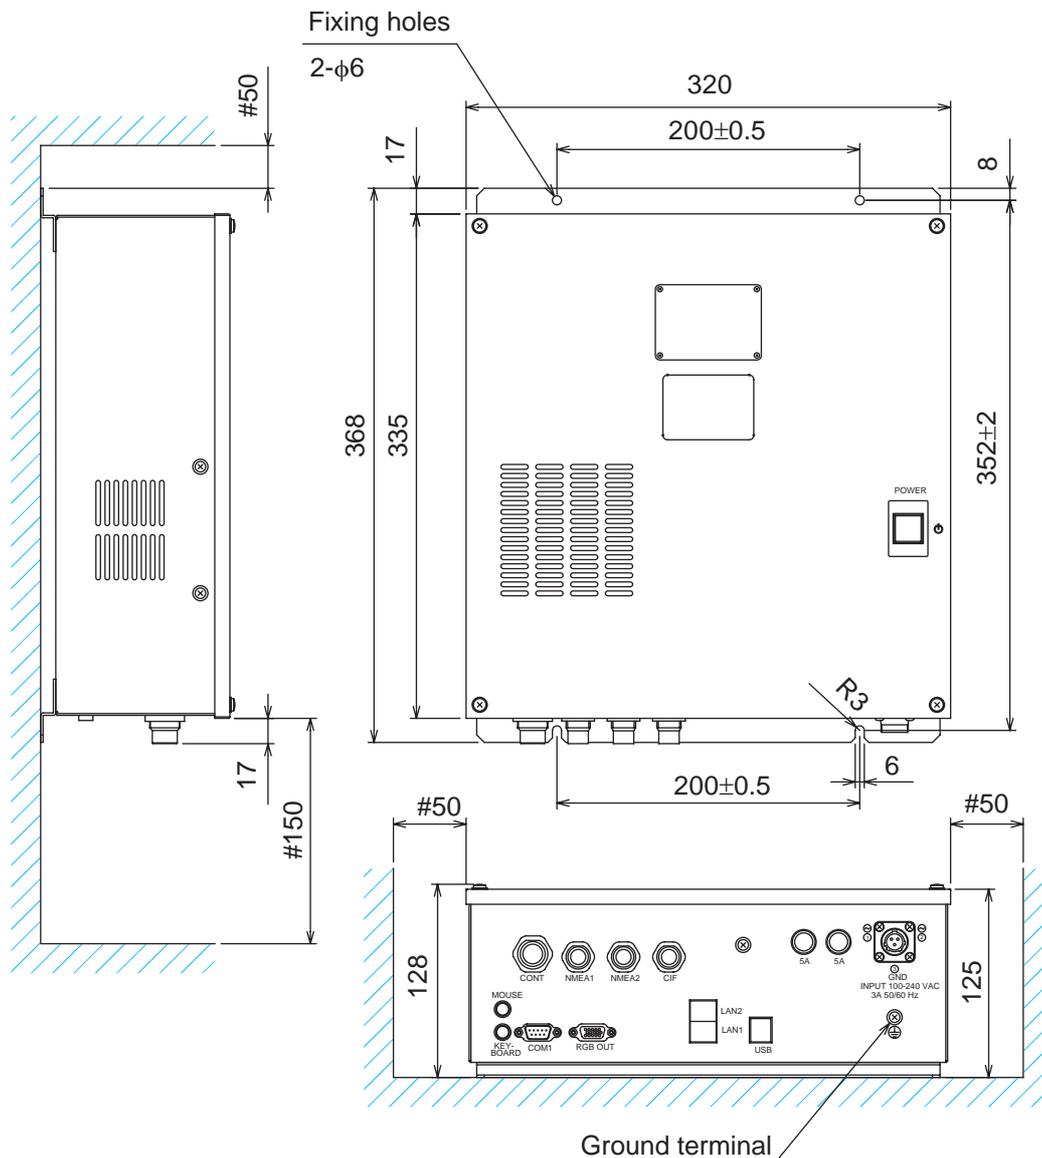

1.3   Transceiver Unit

The transceiver unit is designed to be mounted on the deck. Select a mounting location considering the points below.

- The transceiver unit generates heat so the mounting location should be well ventilated and dry.

- The unit is only designed for deck mounting.

- Secure the maintenance space "#" shown in the figure below for ease of maintenance and service.

- For the CV-302-MS (transceiver unit with motion sensor), install it horizontally in the location where the ambient temperature is lower than 45°C. If the front panel of the unit is oriented to port, its motion sensor faces the bow, i.e., the arrow mark on the NOTE label on the transceiver unit orients to bow. After installation, compensate for installation angle error, referring to chapter 3.

If necessary, install a channel base on the mounting location, consulting with the shipyard. Fasten the transceiver unit to the channel base with M12 bolts. If necessary, reinforce the transceiver unit against vibration by stays extending from the eyebolts.

Channel base & Deck side cable entry

4
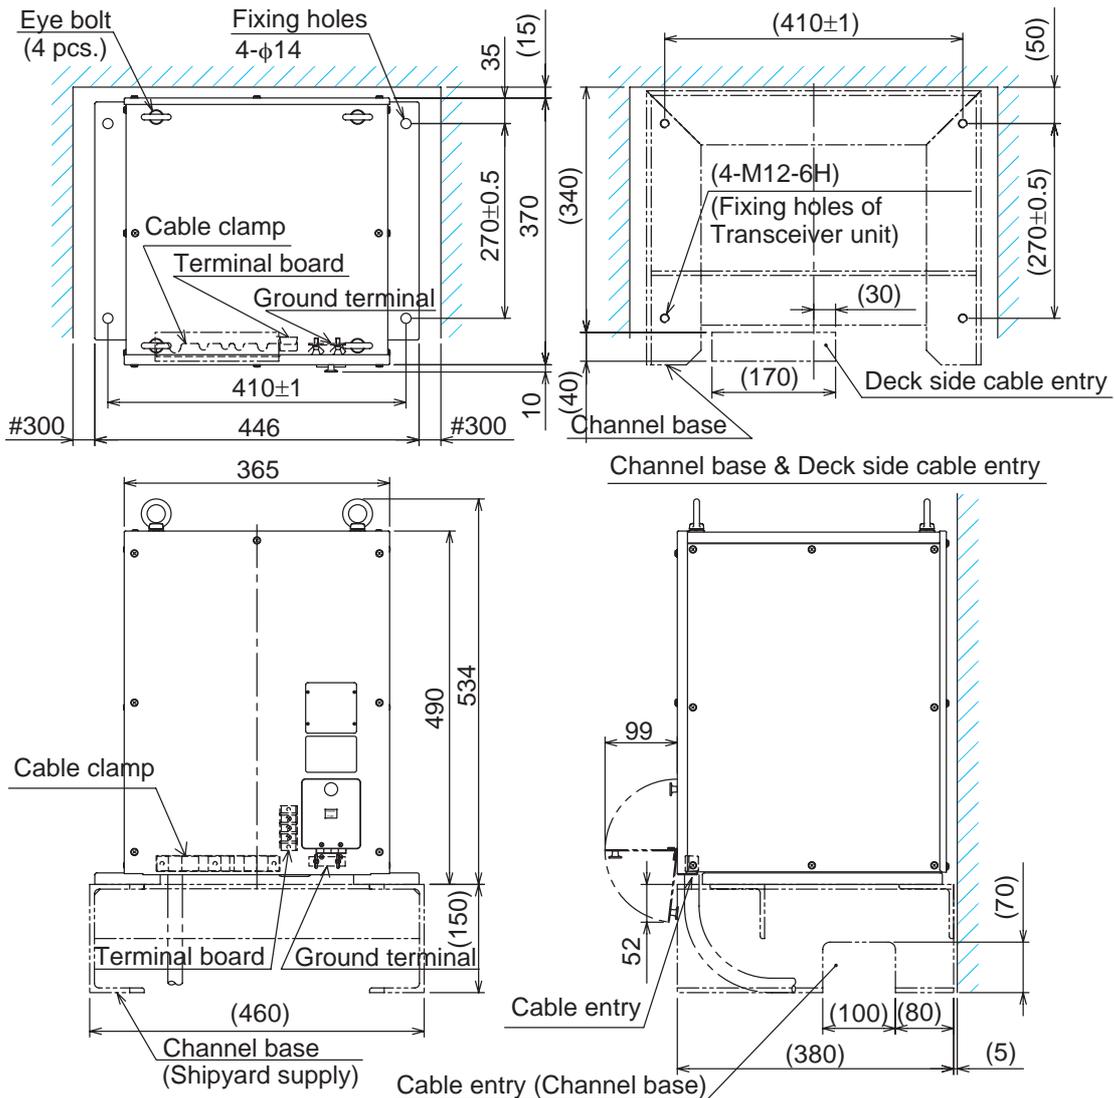

1.4   Transducer

The performance of the color sounder depends upon the transducer position.

- A place least affected by air bubbles should be selected since turbulence blocks the sounding path.

- Select a place not influenced by engine noise.

- Further, select a place not influenced by other electronic device.

Install the transducer on the hull, orienting it so the bow mark is facing the ship's bow.

Note: Carefully handle the transducer. Do not lift the transducer by holding the cable, nor drop it.

It is known that air bubbles are fewest at the place where the bow first falls and the next wave rises, at usual cruising speed. In small, slow-speed boats, the position between 1/3 and 1/2 of the ship's length from the bow is usually a good place. The face of the transducer must be facing the sea bottom in normal cruising trim of the boat.

Refer to the installation drawing for the transducer, combined with the thru-hull pipe TFB-1600 and optional transducer tank T-625.

1.5   Junction Box

If the length of cable between the transducer and transceiver unit is more than 15 m, the optional junction box (with 10 m or 20 m cable) can be used for cable extension.

For bulkhead mounting, orient the cable entry downside and fix the junction box with M5 bolts (shipyard supply).
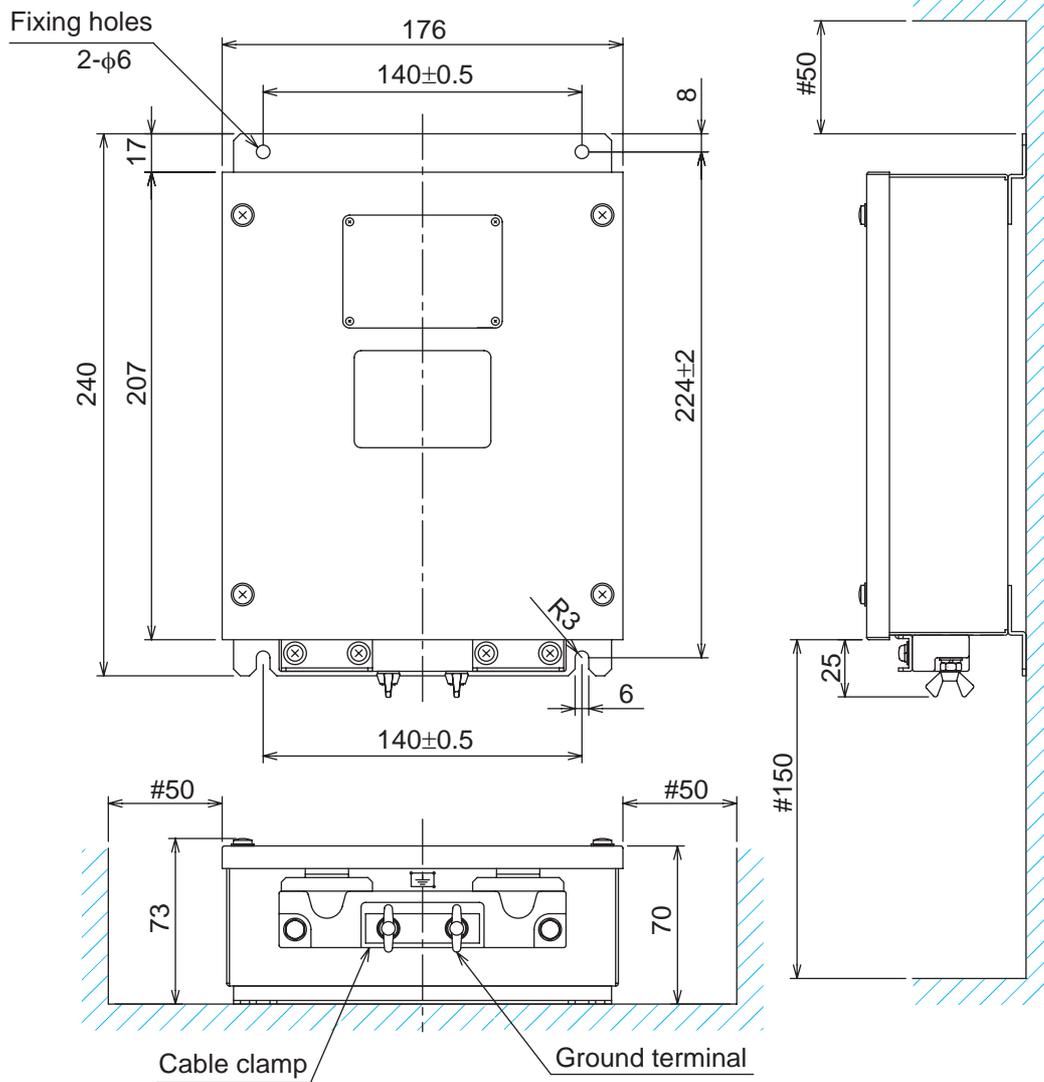

2. WIRING

2.1 Interconnection

Refer to the interconnection diagram at the back of this manual for detailed information.
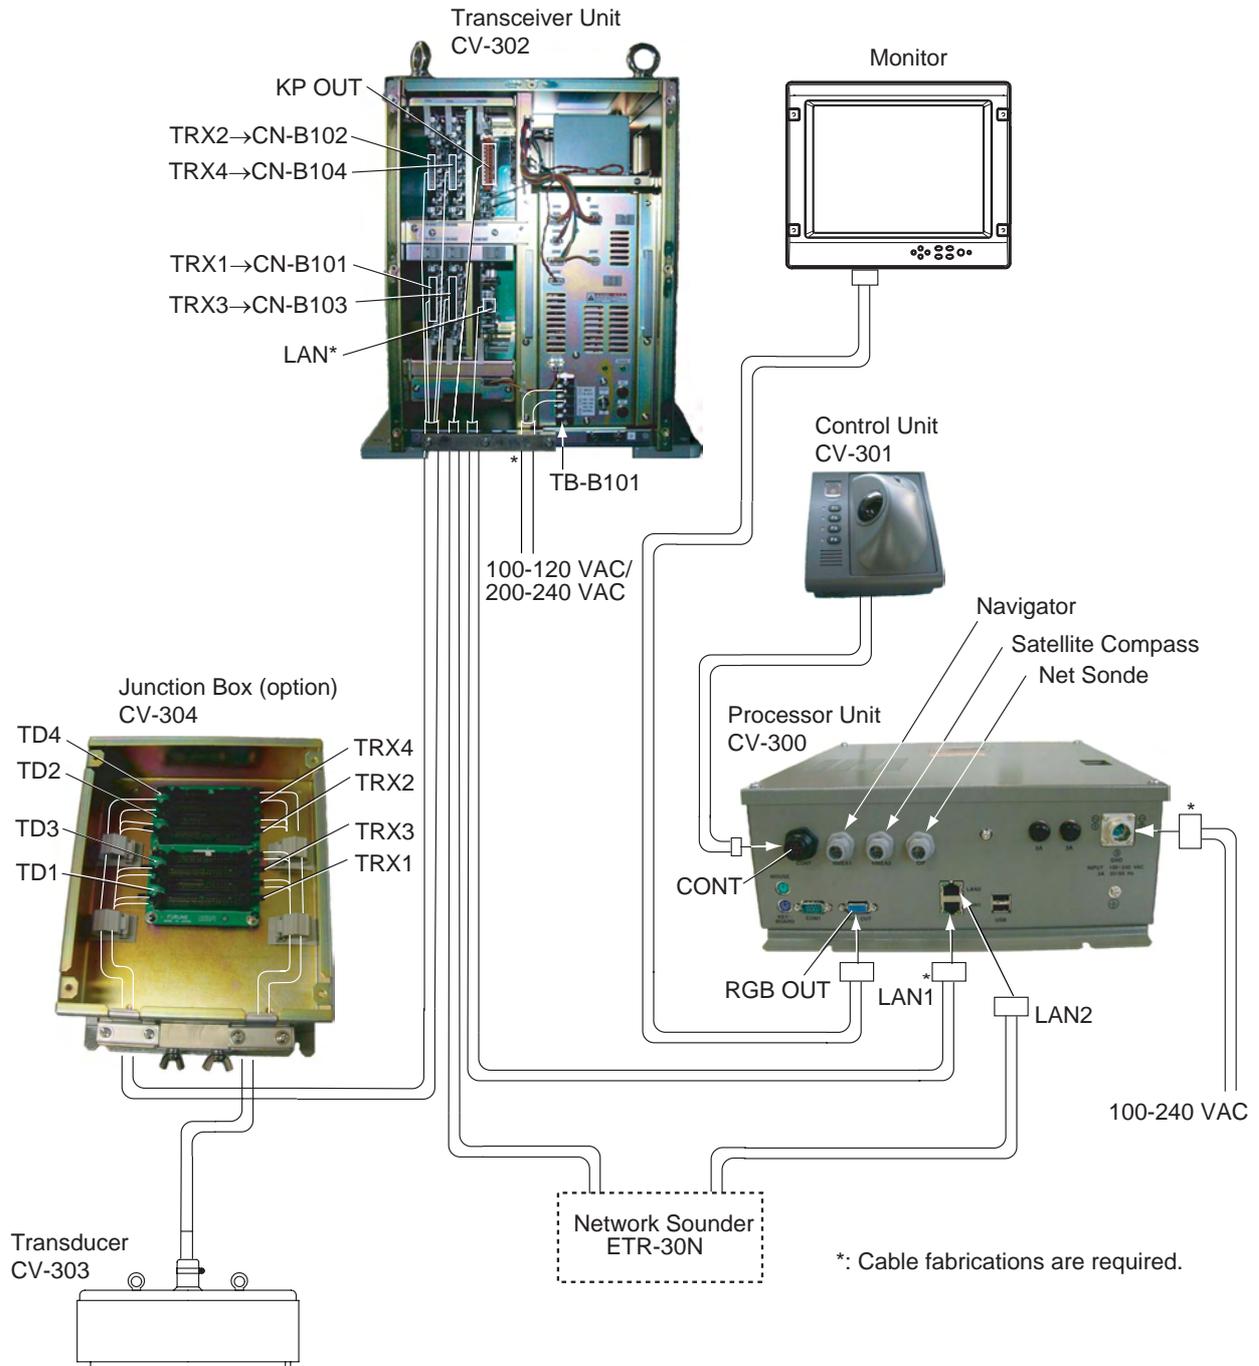

Wiring diagram

Cable running in the junction box

Fold back the harnesses of
TD2 & TD4 and pass them
to clamp 1.

Clamp 1

TRX4

TRX2

TRX3

TRX1

Clamp 2

Fix the braided shield
by cable clamp.

8
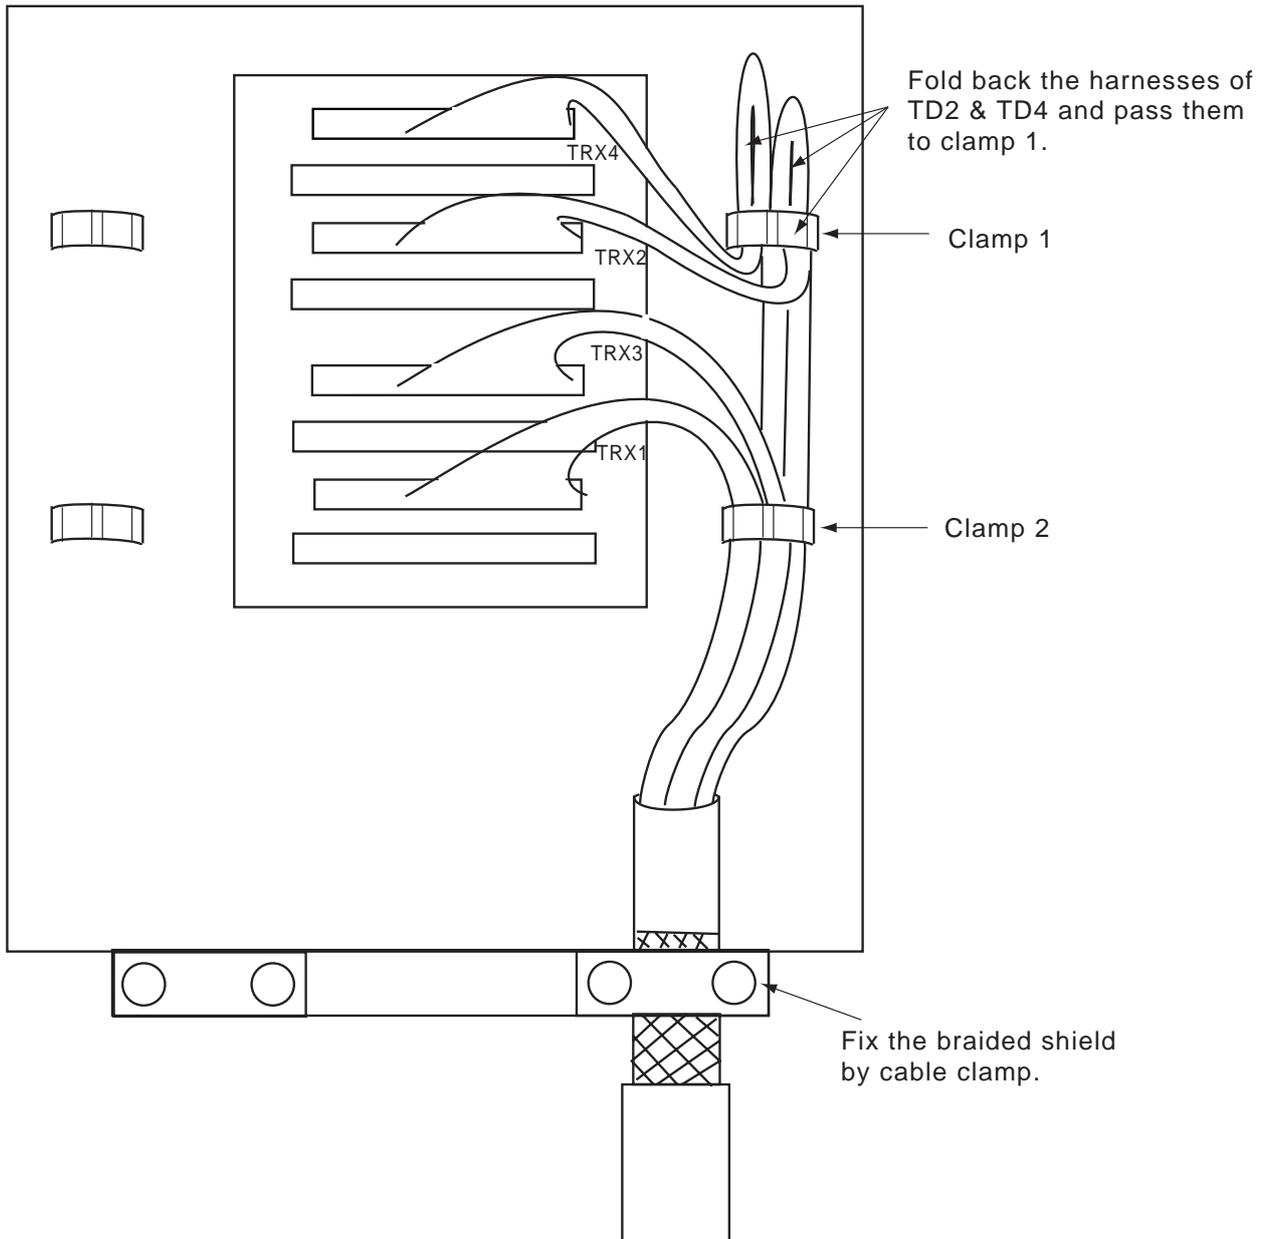

2.2   Cable Fabrication

LAN cable

The LAN cable (FR-FTPC-CY 10, 20, or 30 m) connects between the processor unit and the transceiver unit. Cut armor and outer vinyl sheath as shown below and then connect the modular connector MPS588-C (supplied) to both ends.

| 225 | 30 | | 150 |

Inner vinyl sheath

Outer vinyl sheath

Inner vinyl sheath

TRANSCEIVER
UNIT SIDE

Armor
(Clamp by the cable clamp.)

PROCESSOR
UNIT SIDE

Wrap vinyl tape.
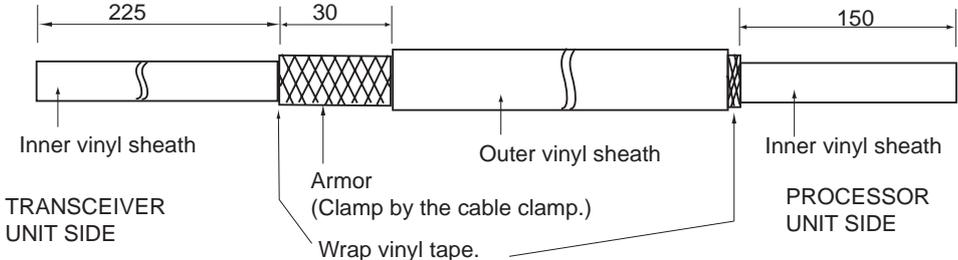

1

Expose inner vinyl sheath.

2
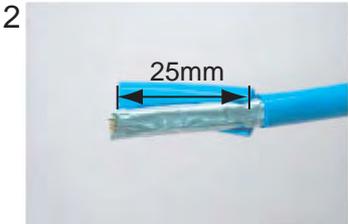

25mm

Remove the outer sheath by approx 25 mm. Be careful not to damage inner shield and cores.

3

approx. 9mm
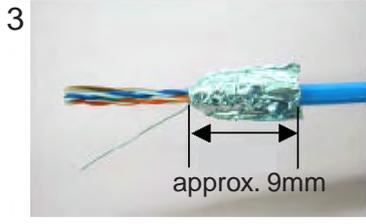

Fold back the shield, wrap it onto the outer sheath and cut it, leaving 9 mm.

4

approx. 9mm

Fold back drain wire and cut it, leaving 9 mm.

5

approx. 11mm
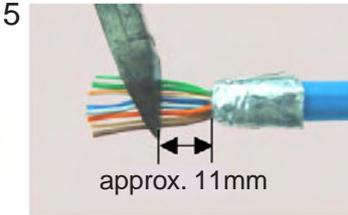

Straighten and flatten the core in order and cut then, leaving 11 mm.

6

Drain wire

Insert the cable into the modular plug so that the folded part of the shield enters into the plug housing. The drain wire should be located on the tab side of the jack.

7

Using special crimping tool MPT5-8 (PANDUIT CORP.), crimp the modular plug. Finally check the plug visually.

9
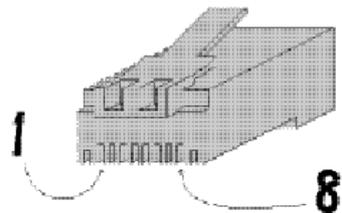

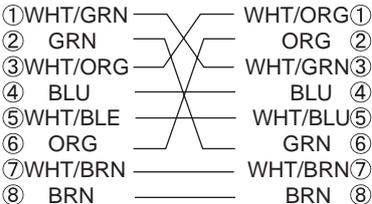

Power cable for the processor unit

Use power cable DPYC-2.5 (Japan industry standard cable) or equivalent. Connect connector SRCN6A13-3S (supplied) as follows.

Attaching connector SRCN6A13-3S

Sectional view of cable DPYC-1.5
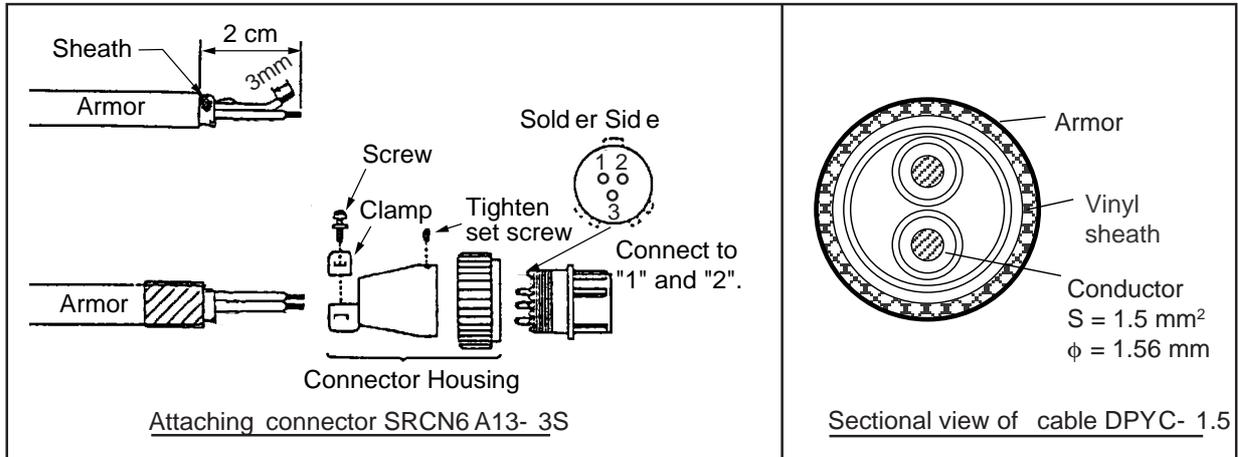

Power cable for the transceiver unit

Use power cable DPYCYS-1.5 (Japan industry standard cable) or equivalent. Connect crimp-on lugs FV5.5-S4 (supplied) as follows.
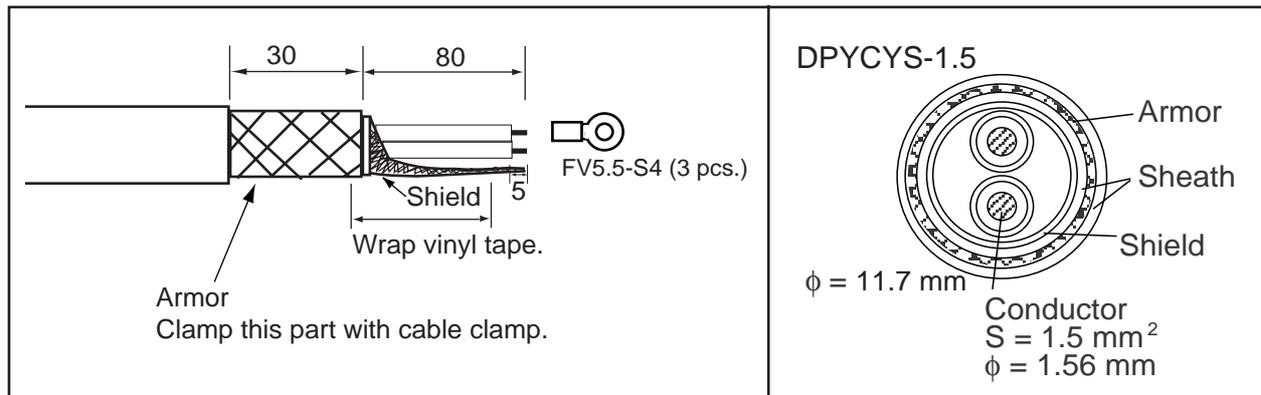

Ground

The processor unit, transceiver unit and junction box should be grounded to prevent electrical shock and mutual interference. Connect an earth plate or earth wire between unit and ship's superstructure to ground.

⚠ **CAUTION**

Ground the equipment to prevent electrical shock and mutual interference.
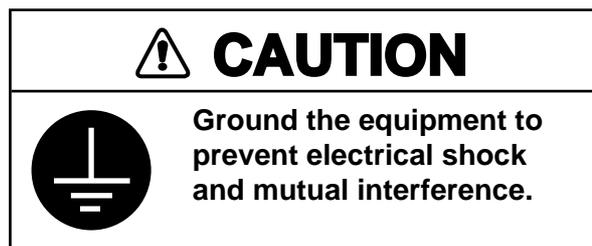

2.3 Synchronizing Transmission with Echo Sounder or Other Sonar

To synchronize transmission of the FCV-30 with an echo sounder or other type of sonar, connect it as shown below. Also, set the **Ping Setting** to **External**, referring to page 3-4 and 3-5 of the FCV-30 Operation manual.

FCV-30 Transceiver unit

Sonar, E/S

Vinyl wire (local supply)
AWG22-26

Terminal opener

Wire

Twist

WAGO connector

Procedures
1. Twist the cores
2. Press the terminal opener downward.
3. Insert the wire to hole.
4. Remove the terminal opener.
5. Pull the wire to confirm that it is ecure.

11
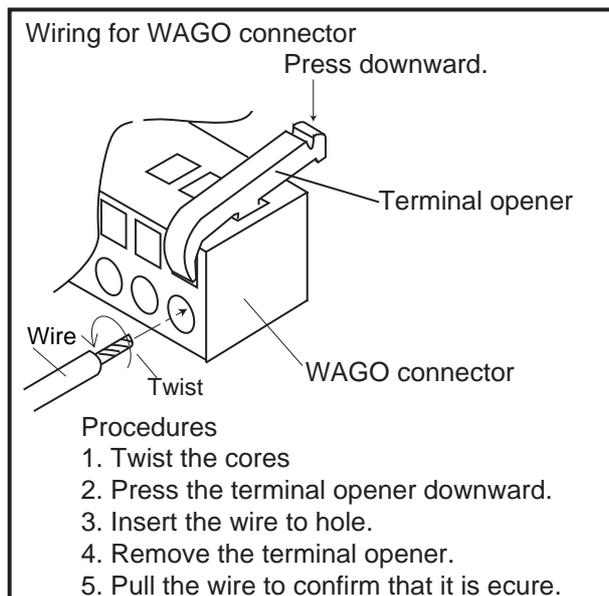

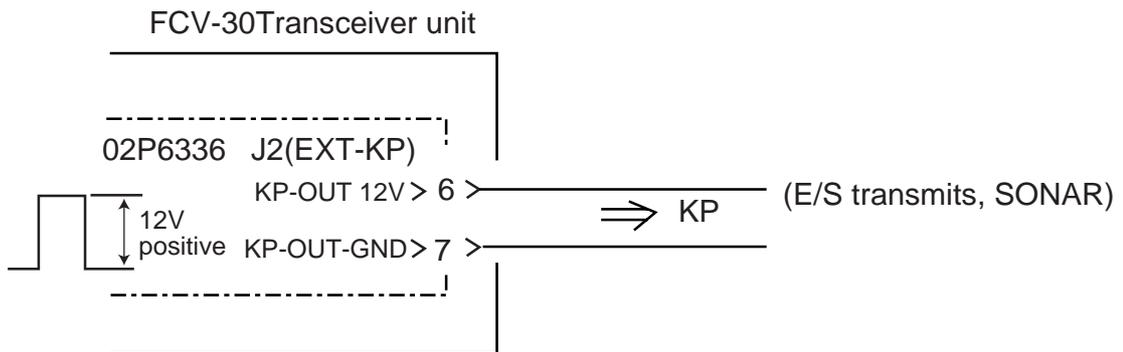

2.4 Input/Output Sentences

Input sentences (talker not specified)

Sentence	Data	Remarks
GGA	Time, position	NMEA
GLC	GRI, TD (Loran C)	NMEA
GLL	Latitude and longitude	NMEA
GTD	TD (Loran C)	NMEA
MTW	Water temperature	NMEA
RMA	Loran C data (Latitude and longitude, TD, ground speed and course	NMEA
RMB	Recommended minimum navigation information	NMEA
RMC	GNSS data (Latitude and longitude, ground speed and course)	NMEA
VTG	Speed through the ground and course	NMEA
BWC	Bearing and distance to waypoint	NMEA
VHW	Water speed and heading	NMEA
GNS	GNSS fix data	NMEA
ZDA	Time and date	NMEA
hve	Heave information (Satellite compass) P sentence	SC
att	Roll and pitch angle (Satellite compass) P sentence	SC

Output sentences

Talker	Sentence	Data	Remarks
SD	DBS	Depth below sea surface	Ver. 1.5
SD	DBT	Depth below transducer	Ver. 1.5, 2.0, 3.0
SD	DPT	Depth below transducer	Ver. 2.0, 3.0
YC	MTW	Water temperature (With connection of water temperature sensor)	Ver. 1.5, 2.0, 3.0
SD	TLL	Target position	Ver. 1.5, 2.0, 3.0
SD	vrm	VRM depth, P sentence	Ver. 1.5, 2.0, 3.0
SD	btm	Seabed discrimination data	Ver. 1.5, 2.0, 3.0

CIF input signal

Signal	Data	Remarks
58	Temperature	
D3	Sonde no., water temperature, Net depth	

3.   SYSTEM SETTINGS AFTER INSTALLATION

After installing all equipments, set up the equipment as shown in this chapter.
The FCV-30 is shipped from the factory ready for connection to an XGA monitor. To connect an SXGA monitor, contact a FURUNO agent or dealer.

System Setting

Do the system settings as follows.
1. Click **System** in the menu bar to open the system menu.
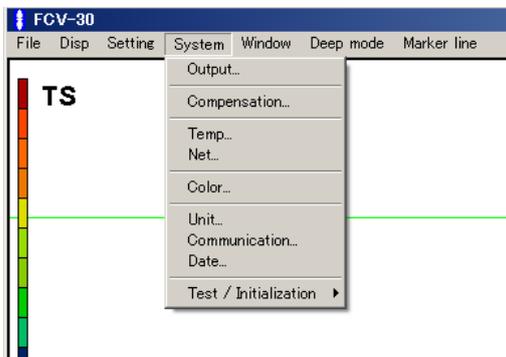

Output

1. Click **Output** in the system menu to show the OUTPUT dialog box.
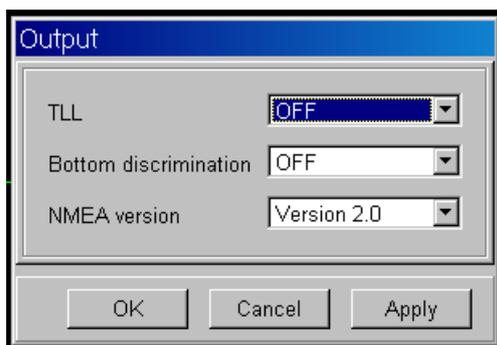

2. To output the TLL data (when the "Maker Line" in the menu bar is clicked) to external equipment via NMEA port, set **TLL** to **ON**.
3. To output the seabed data to external equipment via NMEA port, set **Bottom discrimination** to **ON**.

    Note that this function outputs bottom hardness/roughness in ten levels, however there is currently no receiving device which handles this data.

4. To set NMEA version according to equipment connected, choose the version among 1.5, 2.0 and 3.0.
5. Click the **OK** or **Apply** button.

Compensation

1. Click **Compensation** in the system menu to show the Compensation dialog box is displayed.
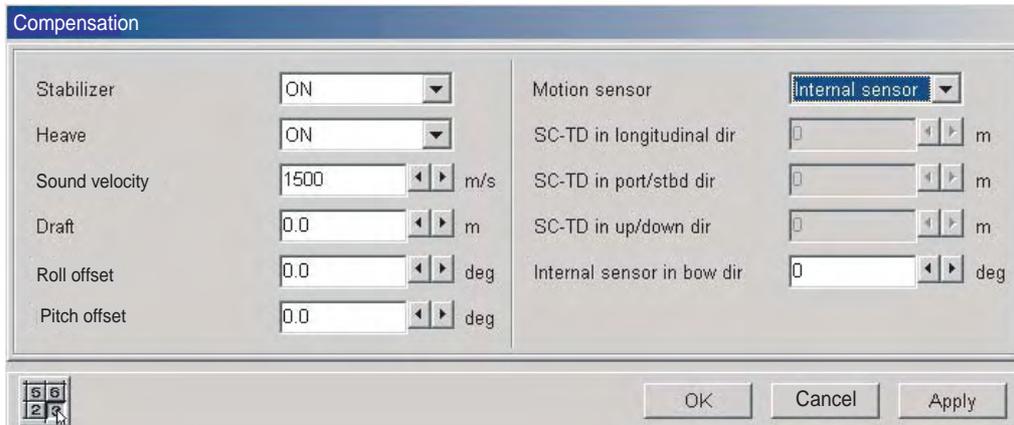

Ten key button

2. Set the following items. To enter numeric values, press the ten-key button at lower left-hand side to open the ten-key panel. Click appropriate numeric keys.
   Stabilize: Choose ON to activate the stabilization function.
   Heaving: Choose ON to enable the heaving correction function. The satellite compass is required to connect.
   Sound velocity: Compensate the sound speed if the depth indicated on the screen is different from the usual depth indication for the area. (Setting range: 1400 to 1600 m/s)
   Draft: Set the ship's draft if you want to display the depth from sea surface to seabed rather than from the transducer. (Setting range: -6.0 to +60.0 m)
   Roll offset: Compensate the roll angle error of the motion sensor. Set positive values when the starboard is up. (Setting range: -10.0 to +10.0 degrees)
   Pitch offset: Compensate the pitch angle error of the motion sensor. Set positive values when the bow is up. (Setting range: -10.0 to +10.0 degrees)
   - Note that the satellite compass has its own roll and pitch corrections. Enter compensations here or at the satellite compass; do not compensate at both.
   Motion sensor: Choose the internal sensor or SC (Satellite Compass) for stabilization.
   SC-TD in longitudinal dir: Set the longitudinal distance from satellite compass antenna (SC) to transducer (TD). If the TD is bow side, set positive values. (Setting range: -100.0 to +100.0 m)
   SC-TD in port/stbd dir: Set the transverse distance from SC to TD. If the TD is starboard side, set positive values. (Setting range: -100.0 to +100.0 m)
   SC-TD in up/down dir: Set a vertical distance from TD to SC, in positive values. (Setting range: -100.0 to +100.0 m)
   Internal sensor in bow dir: If so equipped, correct installation angle error of the internal motion sensor, i.e., the transceiver unit. If the transceiver unit is installed with its front panel facing to the port side exactly, the motion sensor faces the bow at zero degrees. If installed panel facing to the bow, enter 90. (Setting range: 0 to 360 degrees)
   - Inscribe this setting value on the NOTE label on the front panel of the transceiver unit.

Temperature

1. Click **Temp** in the system menu to show the "Temp" dialog box.
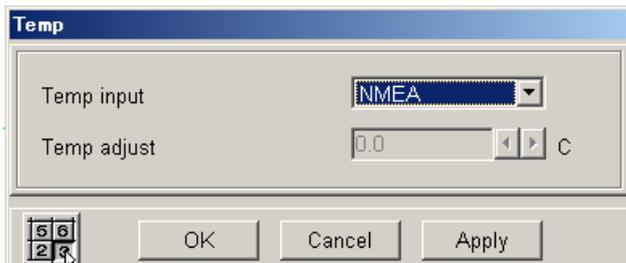

2. Set the following items.
   Temp input: Choose CIF or NMEA as the temperature data source as appropriate.
   Temp adjust: Enter compensation value for CIF input. (Setting range: -20.0 to +20.0 degrees)

Net

1. Click **Net** in the system menu to show the "Net" dialog box.
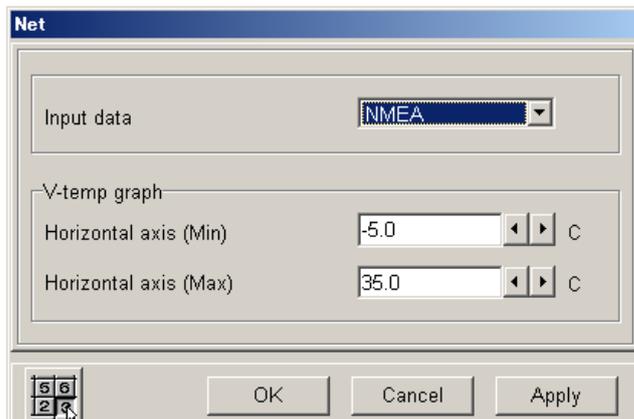

2. Set the following items.
   Input data: Choose CIF or NMEA as the net data source as appropriate.
      CIF: The temperature & depth data from the net recorder.
      NMEA: The temperature & depth data from the trawl sonar.
   Horizontal axis (Min): Set minimum value of the horizontal axis of the vertical temperature graph. (Setting range: -5.0 to +35.0 degrees)
   Horizontal axis (Max): Set maximum value of the horizontal axis of the vertical temperature graph. (Setting range: -5.0 to +35.0 degrees)

15

Communication parameters

1. Click **Communication** in the system menu to show "Communication" dialog box.

2. Set the following items.
   IP address: Set the IP address of the network.
   Port: Set the port number. Normally no change is required.
   Port in the NMEA/SC/CIF field:
      COM1: Choose this when an external equipment is connected to COM1 port of the processor unit.
      NMEA1: Choose this when an external equipment is connected to NMEA1 port of the processor unit.
      NMEA2: Choose this when an external equipment is connected to NMEA2 port of the processor unit.
      CIF: Choose this when an external equipment is connected to CIF port of the processor unit.
   Baud rate: Set baud rate of the transmission signal among 4800, 9600, 19200 and 38400 bps for NMEA and 600, 1200, 2400 and 4800 bps for CIF.
   Bit rate: Set the character size of the transmission data between 7 bit and 8 bit.
   Stop bit: Set the stop bit size of the transmission data among 1 bit, 1.5 bit and 2 bit.
   Parity bit: Set the parity of the transmission data among none, odd and even.

Note: To output data from SC-50/110 in NMEA format, set the SC-50/110 as follows.
   -Output format: IEC ed1
   -Sentence: ATT, HVE (For others, set all OFF.)
   -Baud rate: 38400 bps
   -Cycle: 25 ms
   (Talker : any)

<u>**Setting the Date**</u>

1. Click the **Date** in the system menu. The Date dialog box is displayed.
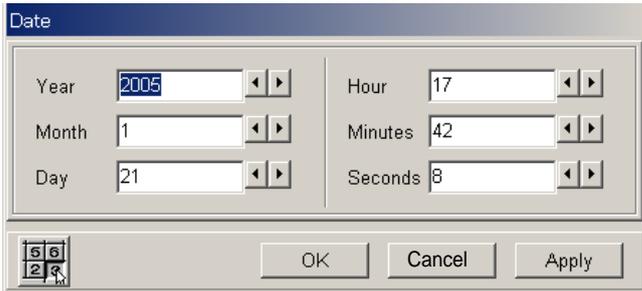

2. Using ◄ or ► or ten-key panel, enter current date and time.
3. Click the **OK** or **Apply** button. From this moment, the time counts up.

Note that the date and time are not displayed on the screen, however data files which are downloaded are named by date and time. The time is backuped by the internal battery cell.

Transducer parameters

The data sheets about the transducer parameters are attached to the transducer. Detach them and attach one on the display unit and one to last page of the operator's manual. The compensation data on the sheet should be entered here. However, this compensation can be done by only serviceman.

1. Using the mouse wheel, double-chick the space just below the **CLOSE** button, and left-chick **2005** and **ENTER** to open the Service menu.
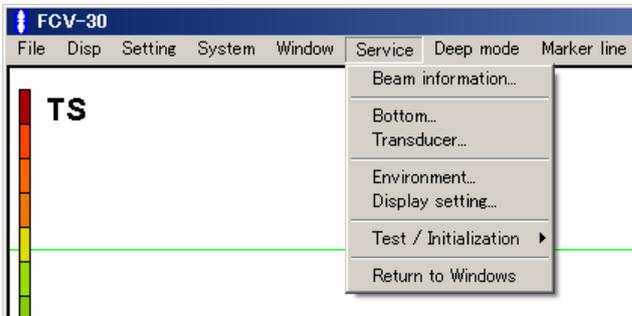

2. Choose **Service** – **Transducer** in the menu bar to show the Transducer dialog box.
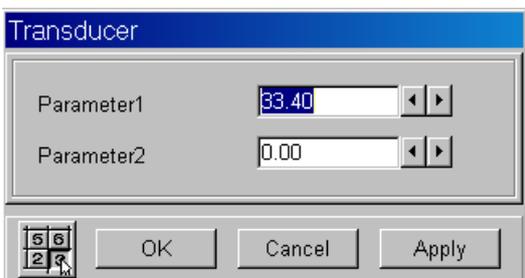

3. Enter the parameters in the Parameter1 and Parameter2 boxes, referring to the parameter sheet attached to the transducer cable. If the parameter 2 in the parameter sheet is blank, leave the setting 0.00.

4. Click the **OK** button to close the dialog box.

5. Using the mouse wheel, double-click the space just below the CLOSE button and left-click ENTER. The Service menu disappears. Also, the Service menu disappears by turning off and on the FCV-30.

Note: Do not change the setting in the **Beam Information, Bottom** or **Environment** in the **Service** menu at installation.

Network Sounder Setting

When connecting the network sounder ETR-30N, set the transducer (frequency) and network.

Transducer (frequency) setting

1. Click **ETR** in the **File** menu to show the ETR window.
2. Hold down [F1] and [F4] key and click the **System** in the ETR window.
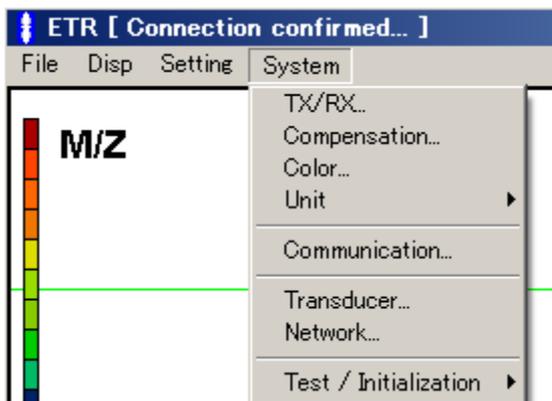

3. Click **Transducer** to show the ETR Transducer window.
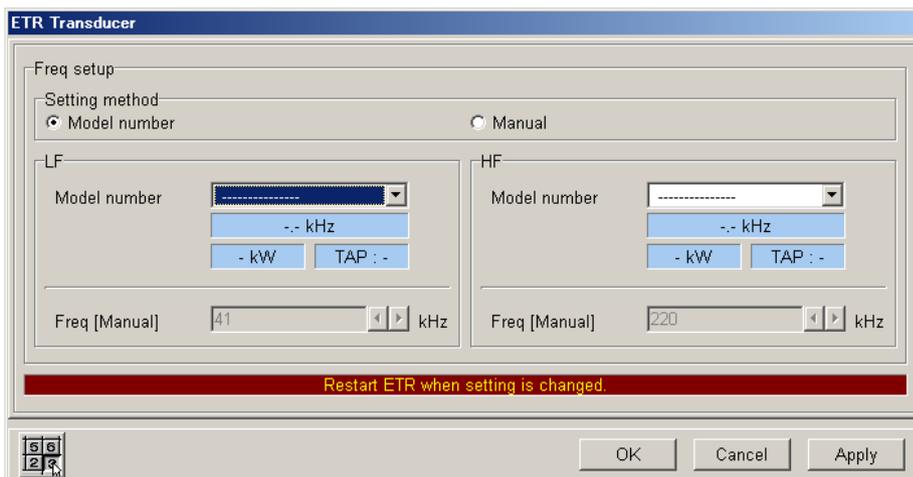

4. If the transducer to be used is programmed in the FCV-30, choose **Model number** in the Setting method box, and choose the model in LF or HF box.
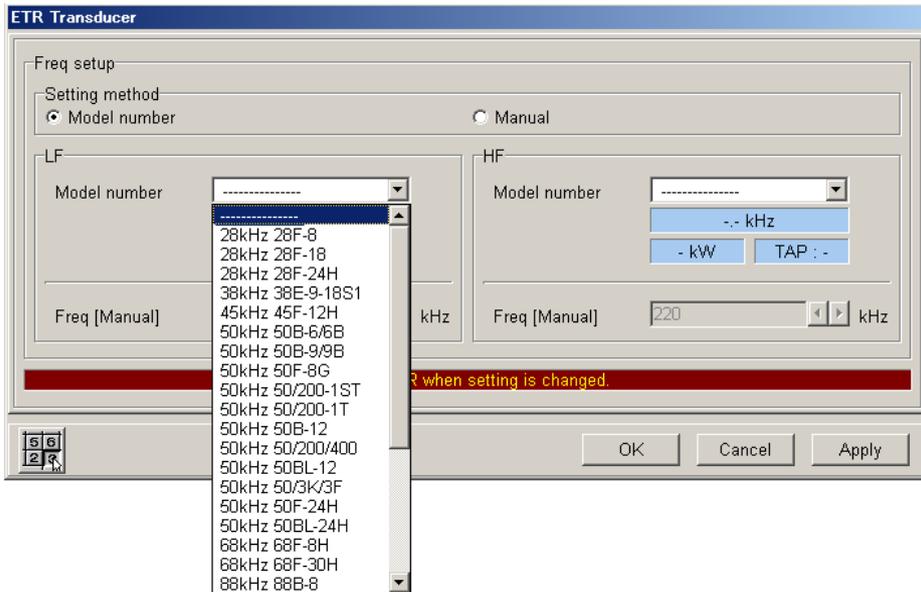

Note: Change the tap inside the ETR-30N according to the character which appears next to "TAP": A to D displayed beneath the frequency. For details, see the Operator's Manual for the ETR-30N.

5. If the transducer is not programmed in the FCV-30, choose **Manual** in the Setting method box, and enter the frequency manually by the keyboard or use ◄ or ► button (Setting range: 25 to 220 kHz).
6. Click the **Apply** button and then the **OK** button.

Network Setting

1. Hold down [F1] and [F4] key and click the **System** in the ETR window.
2. Click Network to show the ETR Network window.
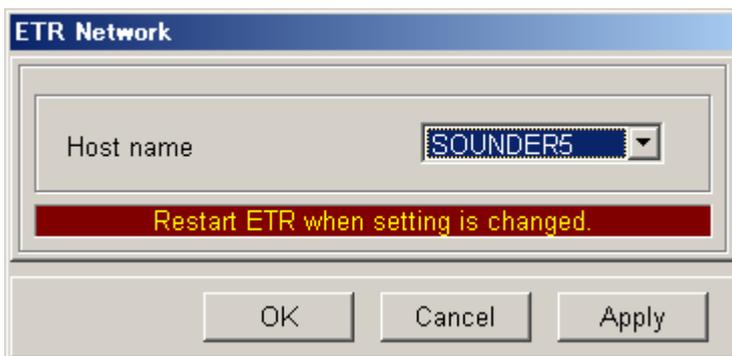

3. Choose the Host name from the drop-down menu according to ETR-30N setting.
    Choose **SOUNDER** when Host name of ETR-30N is 0, and choose **SOUNDER 1** when Host name of ETR-30N is 1, etc. For details, see the Operator's Manual for ETR-30N.
4. Click the **Apply** button and then the **OK** button.

Note: After changing setting, reboot ETR-30N.

注 記
1. ※：造船所手配
2. 切断・溶接の際は、歪み防止のため送受波器を取り外した状態の "送受波器取付フランジ" を必ず取り付けておいてください。
3. 電線貫通金物を溶接する際は、パッキンを取外して行ってください。
4. 送受波器ケース取付の際には船首、船尾の確認をしてください。
5. 船尾側上端に空気抜き用穴（φ10～φ20程度）をあけてください。
6. 電線貫通金物はフレーム等の邪魔にならない所で送受波器に当たらず キャップナットが容易に締め付けられる位置に取り付けてください。
7. 網除け、保護タンクは必要に応じて造船所にて製作してください。
8. 装備後はサビ止め塗装をはがした後正規の塗装をおこなってください。
9. 塗装の際、送受波器面を塗装しない様に注意してください。
10. 送受波器取付後、A部の隙間をシリコン等で埋めてください。
11. 指定外の寸法公差は、表1のとおりです。
12. ボルト類には焼き付き防止グリス（モリシーラ１９１０等）を塗布してください。
13. 表記質量に送受波器の質量は、含まれていません。

NOTE 1. ※:SHIPYARD SUPLLY
2. TO AVOID DISTORTION BY HEAT, PUT "FIXING FLANGE" (WITHOUT TRANSDUCER) ONTO CASING WHILE CUTTING AND/OR WELDING.
3. REMOVE GASKET FROM THRU-HULL PIPE BEFORE WELDING.
4. CASING SHOULD FACE BOW DIRECTION.
5. MAKE A HOLE OF 10 TO 20MM IN DIA ON STERN SIDE TO ALLOW AIR TO ESCAPE FROM TANK.
6. ALLOW ENOUGH CLEARANCE AROUND THRU-HULL PIPE FOR EASY TIGHTENING AND SERVICING.
7. IF NECESSARY, PROVIDE NET PROTECTOR AND PROTECTION TANK (BY SHIPYARD.)
8. AFTER INSTALLATION, REMOVE ANTICORROSIVE PAINT FROM CASING AND THEN PAINT ACCORDING TO SHIPYARD INSTRUCTIONS.
9. DO NOT PAINT TRANSDUCER FACE.
10. "A": FILL GAP AROUND BOLT WITH SILICON SEALANT.
11. TABLE 1 INDICATES TOLERANCE OF DIMENSIONS WHICH IS NOT SPECIFIED.
12. APPLY BURNPREVENTION GREASE TO BOLTS.
13. MASS SHOWN IS TANK WITHOUT TRANSDUCER.
