MIP 5000 VoIP Radio Console

MOTOROLA

Manage field emergencies without leaving home.

When a big storm hits and power lines go down, Motorola's MIP 5000 deployable VoIP radio console allows you to quickly and easily establish a command center anywhere a network connection is available. The powerful radio over IP dispatch console installs on a laptop or desktop to help insure that critical information gets where it needs to go without interruption. For around the clock coverage, the MIP 5000 radio console allows your on-call manager to power up a laptop in the middle of the night and communicate directly with a technician in the field without leaving home.

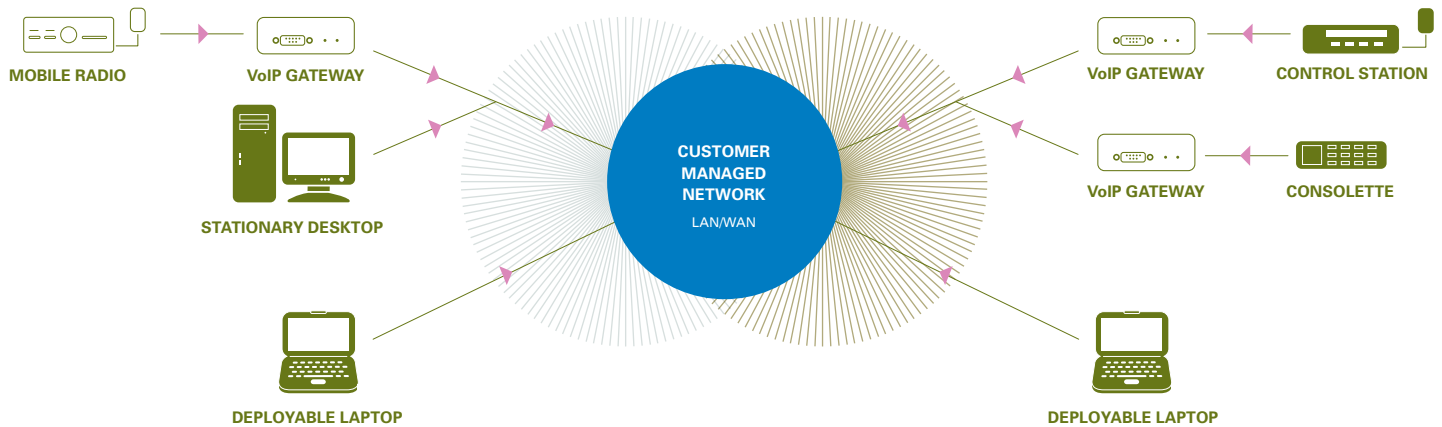

The VoIP console application operates on a standard computer, quickly installs in a Windows environment and communicates with any manufacturer's radios, including Local, Tone, and Motorola's digitally controlled radios to allow connectivity as needed. Wherever deployed, this network-enabled radio console helps to assure, continuous, high-quality communication and is an affordable alternative to more hardware intensive dispatch solutions.

MIP 5000 VoIP Radio Console Sample Scenario

MIP 5000 VoIP RADIO CONSOLE FEATURES

- MDC 1200 Signaling
 - PTT ID and Emergency
 - Call Alert
 - Selective Call
 - Radio Enable and Disable
- Conventional ASTRO Signaling
 - PTT ID and Emergency
 - Call Alert
 - Selective Call
 - Radio Enable and Disable
- Status Message
- Emergency Alarm Response
- Intercom
- Multi-Select (APB)
- Page History Window
- Single Button Paging
- Radio Patch
- Supervisory Takeover
- Instant Recall Recorder (Option)

COMPATIBLE ACCESSORIES

- Standard PC stereo speakers
- USB
 - Headset
 - Footswitch
 - Desk microphone

VoIP Radio Dispatch Gives Power to Many

The MIP 5000 radio console consists of VoIP software and a compact MIP 5000 gateway for each radio channel managed. The scalable dispatch solution leverages your existing Ethernet network infrastructure, changing dispatch from just one point of contact to many by putting radio communication within the reach of every employee with access to the network. In fact, this one application provides voice communication for order initialization, order scheduling, route building, dispatching and field order completion, heightening productivity and speeding response time no matter what the situation.

Network Enabled for Flexible Dispatch Control

From a networked desktop computer in the main building or control room to a laptop in the field, the MIP 5000 radio console allows utility personnel to talk and listen on up to eight talk paths (channels) of radio traffic wherever a network connection is available. While one user may have access to just one channel, another resource or line Manager can have access to all 8 channels, allowing for easy on- or off-site monitoring and communication. And when a situation requires patching radios together, the MIP 5000 radio console uses an easy drag and drop action to allow even radios from different manufacturers to talk to each other.

Clean Installation and Remote Upgrades Equal Owner Savings

Because the MIP 5000 connects to your existing network, installation is simple and cost-effective. The Windows-enabled solution does not require a special computer, cable pulling or expensive lease lines. With the look and feel of familiar applications in a standard Windows environment, the MIP 5000 software is easy to learn and use. Plus, remote software upgrades to multiple locations minimize service costs, providing even more cost of ownership savings.

* The ML 900: Motorola's most advanced mobile laptop

Over 70 years of understanding the needs of our customers.

For over 70 years public safety, government and enterprise customers have trusted Motorola to provide communication and information solutions to: connect work teams together for improved efficiency; connect information to people who need it most; connect citizens to agencies for improved response.

Our experience, along with our skills, people, partnerships and alliances, allow us to provide innovative, fully integrated technologies that help organizations like yours share vital information with ease and confidence.
